## About Us

Health Dimensions Compounding Pharmacy has been providing customized prescriptions to doctors and patients since 1996. We are a specialty pharmacy whose focus is on improving the quality of prescription care for patients everywhere. From the beginning, our systems and procedures have been built upon the highest standards in the industry. To this end, we have recently been awarded Pharmacy Compounding Accreditation Board (PCAB) certification; among the first pharmacies to do so.

Health Dimensions is able to meet your medication needs. Our laboratory is a state-of-the-art facility, comprised of three separate, uniquely designed laboratories: **general compounding, potent chemicals and sterile services**. All formulas are prepared with pure ingredients sourced from FDA registered suppliers and manufacturers. Specific quality control measures permeate all processes during order fulfillment.

Since 1996, Health Dimensions has been built upon a dedication to quality. Now, PCAB accreditation makes choosing a quality prescription compounding facility easier for doctors and patients. We look forward to serving you!

## What is pharmaceutical compounding?

Compounding is the exercise of preparing custom dosed medications. Therapies are tailored to an individual's needs when a commercial medication is not available in the dose, form or strength needed. Many patients are allergic to preservatives, dyes or are sensitive to standard strengths. With a physician's order a compounding pharmacist can change the strength of a medication, alter its form to make it easier for the patient to ingest and add flavor to make it more palatable. A compounding pharmacy can also prepare the medication using unique delivery systems such as a troche or lozenge, a lollipop or transdermal gel. Preparing these customized medications allows compounding pharmacists to achieve the ultimate goal: to help the physician and patient achieve a positive therapeutic outcome.

## Quality Control Procedures

- Meet or exceed QA standards established in USP
- Sterility assurance testing of all batch compounded sterile products
- Use of class 10 (ISO 4) barrier isolator exceeds USP requirement
- Routine environmental monitoring and maintenance schedule
- Stringent quality control standards govern each step of the fulfillment process
- Multiple quality assurance checkpoints govern each fulfillment process
